

Dear Editor,

I revised this case report in according to reviewers comments and Science Editor;

In according to reviewer of 02636166,

- 1. The term "healing" in the title was changed as “remission”*
- 2. I added the table describe cases related to **Balo's concentric sclerosis between 1985-2018.***
- 3. When she learned her own illness, she did not allow us to investigate the treatment in detail. Because of this reason, we have no idea about differential diagnosis includes vasculitis such as systemic lupus and infectious disease.*

In according to reviewer of 00227375,

- 1. He said that in his report, “**this is a rare case report about Balo’s concentric sclerosis. This manuscript is nicely structured and well written. I have no question about this manuscript**”.*

In according to reviewer of 00646291,

- 1. He suggested only specific comments to us about a literature’s findings. Thanks to clinical findings, that sentence was removed from publication (The removed sentence is “**Autopsy study of the edges of BCS lesions confirm supregulated expression of hypoxia-inducible proteins, such as heat-shock protein 70, hypoxia-induciblefactor-1α, and D-110**”*

In according to Science Editor,

- 1. All of our publication was re-evaluated in terms of similarity with other publications, and necessary corrections were made in the publication especially in discussion part.*
- 2. The audio core tip file was changed as a mp3 file.*

Thanks for all reviewers comments and science editor for their contribution,

Best regards,

M.Cudi Tuncer,Professor,Ph.D. (The Chief of Anatomy Department)
Dicle University, Medical School,
Department of Anatomy, 21280,
Diyarbakır, Turkey.
