EASL and French hepatitis C recent guidelines: The paradigm shift

Véronique Loustaud-Ratti, Marilyne Debette-Gratien, Paul Carrier

Abstract

The latest AFEF (French Association for the Study of the Liver) and EASL (European Association for the study of the liver) recommendations announce a change of paradigm, for the management of patients infected with hepatitis C virus (HCV).

The AFEF recommendations focus on the elimination of HCV infection on a national level by preventing reinfection, in less than ten years. This goal involves the facilitation of patients' management in a simplified pathway by increasing screening procedures and access to pan-genotypic treatments mainly in the "reservoir"
