SPECIFIC COMMENTS TO AUTHORS

The author of this review set out ‘to critically review and summarize the available scientific literature regarding pediatric peri-anal infectious disease (PID).’ The review attempted to ‘provide updated information about essential aspects of PID (epidemiology,

etiology, pathogenesis, as well as clinical features, required investigations and therapeutic options) and of diagnostic pitfalls.' It was a well-written review with a painstaking data gathering and analysis, and an in-depth discussion. Although the review article is stated to be a narrative review, it has all the 'trappings' of a systematic review albeit without a meta-analysis; otherwise one would have advocated for the use of a PRISMA flow diagram. The following are however few minor concerns about the manuscript

MINOR CONCERNS

1. Under the Abstract, errors of syntax, punctuation and grammar are littered here and there. For instance, in the first sentence, the phrase 'of bacterial origin' could better read 'which is of bacterial origin'. Ditto for the first sentence under CORE TIP. In the fourth sentence, rather than just stating "from inception", a starting date for the Literature search should have been provided. It was however stated in the body of the manuscript. In the seventh sentence, instead of 'Other numerous conditions are initially considered', it would be better to state that 'PID may mimic other common conditions with skin manifestations (like candidiasis...)' I suspect the word 'consecutive' used here and under CORE TIP should be 'consequent'. Thus, under CORE TIP, the phrase that read 'with consecutive mistreatment' could better read 'consequent wrong application of treatment.'

2. In the Introduction, the author stated that practitioners initiate 'sometimes invasive and costly' investigations for PID. Which invasive and costly tests? Few examples could be given here. Secondly, the recounting of the author's clinic experience is adjudged a redundant statement and may need to be deleted. The aim of the review as stated in the penultimate last sentence can be abridged for clarity.

3. Under the subheading- characteristics of included studies: the term 'totalizing' can be replaced with 'totaling'

4. Under the treatment subheading, the term 'present case(s)' was unnecessarily used several times when it could have been applied once thus 'As written in Table 3, children with PID (including the present cases)....'. The term 'worryingly' could read 'worrisomely'. The abbreviation 'AB' should be dropped

for the full meaning which is 'antibiotics' 5. The Conclusion appears very lengthy. At a point, the author states 'Moreover, associating oral AB with topical antiseptics'. I think it would better read 'Moreover, combining oral antibiotics with topical antiseptics' 6. Table 1 is laden with too much details. Text and table should be complimentary. The current table 1 can be split into two tables 7. Just like table 1, table 2 is very bulky and can be split into two tables. Table 3 is okay in the present format

SPECIFIC COMMENTS TO AUTHORS

Authors have conducted a detailed review on PID; however, there few suggestions to improve it - 1. Details of the literature search could be more specific as the date of inception is not same for all the databases. 2. Similarly, title and abstract is usually
