**Nutritional support in chronic liver disease and cirrhotics**

Ravi Shergill, Wajahat Syed, Syed Ali Rizvi, Ikjot Singh

### Abstract

The liver is a major organ and an essential component in maintaining an appropriate nutritional status in healthy individuals through metabolism of protein, carbohydrates, and fat. In individuals with chronic liver disease, along with a number of other essential functions that the liver serves, its role in nutrition maintenance is severely impaired. Common causes of chronic liver disease include hepatitis C, alcoholic liver disease, and non-alcoholic liver disease. Amongst this population, the most common manifestation of impaired
