Cerebral lipiodol embolism related to a vascular lake during chemoembolization: A case report and review of the literature

Hideki Ishimaru, Minoru Morikawa, Takayuki Sakugawa, Ichiro Sakamoto, Yasuhide Motoyoshi, Yohei Ikebe, Masataka Uetani

Abstract

A male patient underwent conventional transcatheter chemoembolization for advanced recurrent hepatocellular carcinoma (HCC). Even after the injection of 7 mL of lipiodol followed by gelatin sponge particles, the flow of feeding arteries did not slow down. A repeat angiography revealed a newly developed vascular lake draining into systemic veins; however, embolization was
