Portal vein thrombosis in cirrhotic patients - it is always the small pieces that make the big picture

Irina Gîrleanu, Anca Trifan, Carol Stanciu, Cătălin Sfarti Abstract

³ Portal vein thrombosis (PVT) is a frequent and serious complication in patients with liver cirrhosis (LC). Recently, a new classification of PVT was proposed, although the functional component was not completed included. The status of liver disease (compensated/decompensated) should be added to this classification. Reduced portal flow velocity and the acquired hypercoagulable status associated with LC are the main risk factors for PVT development, although endothelial dysfunction may play an important role that needs to be further evaluated. ⁸ The European Association for the
