Successful treatment of pyoderma gangrenosum with concomitant
immunoglobulin A nephropathy: A case report and review of literature

Li XL *et al.* PG and IgA nephropathy

Xiao-Li Li, Zhi-Gang Ma, Wen-Hui Huang, Er-Qing Chai, Yun-Fei Hao

Abstract

Pyoderma gangrenosum (PG) is an uncommon ulcerative cutaneous condition of an unknown etiology and is often associated with immune diseases. However, PG rarely shows visceral involvement, especially in the kidney. A 20-year-old female presented with pedal edema and skin ulceration of both lower limbs. The skin lesion began as an erythematous plaque and then became a blister. She also complained of abdominal distension and a
