Retrospective Study

Short-term efficacy of robotic and laparoscopic surgery for Huang's three-step maneuver for spleen-preserving splenic hilar lymphadenectomy for advanced upper gastric cancer: Results from a propensity score-matched study

Wang JB *et al.* Minimally invasive SPSHL for GC

Abstract

BACKGROUND

Robotic surgery was considered to be significantly better than laparoscopic surgery for complicated procedures.

AIM

This study aimed to explore the short-term effect of robotic and laparoscopic spleen-preserving splenic hilar lymphadenectomy (SPSHL) for advanced gastric cancer (GC) by Huang's three-step maneuver.

METHODS

Total of 643 patients who underwent SPSHL were recruited from April 2012 to

The learning curve of Huang's three-step maneuver was shorter than that of the traditional-step maneuver, and the former represents an ideal maneuver for laparoscopic spleen-preserving splenic hilar lymphadenectomy. To shorten the learning curve at the beginning of laparoscopic spleen-preserving splenic hilar lymphadenectomy, beginners should ...
