SPECIFIC COMMENTS TO AUTHORS

In this manuscript, rapid increase of NASH as an etiology of liver cirrhosis in Mexico is noted compared with the previous study. However, this study is somehow incomplete. More detailed investigation should be performed. #1; Table 1; Meaning of P value is

unclear. Statistical analysis for differences in the distribution of etiology among different hospital is nonsense. #2; Table 2; Please make clear the meaning of P value. In addition, Table 2 is very confused. Please remake Table 2, in order to make clear the difference in the etiology of cirrhosis between male and female. #3; The authors emphasized that NASH related cirrhosis is increasing compared with 2004 study in Mexico. If so, please compare the ratio of sex, and distribution of the etiology in each according to men and women.
