Fatigue in children and adolescents with inflammatory bowel disease

Van de Vijver E *et al.* Fatigue in pediatric IBD

Els Van de Vijver, Ann Van Gils, Laura Beckers, Yannick Van Driessche, Nicolette Dorien Moes, Patrick Ferry van Rheenen

Abstract

AIM

To identify factors other than active disease and anemia that contribute to fatigue in pediatric inflammatory bowel disease (IBD).

METHODS

We performed an electronic search in Medline and EMBASE from their inception to May 2017 using the search term “fatigue” or the related keywords “physical impairment” and “inflammatory bowel disease” with the filter “child” (age 0-18 years). Cross-sectional and case-control studies were included. We restricted our search to studies published in English. We used the PRISMA checklist and flow diagram. Duplicate articles were manually deleted in End Note. To identify further relevant studies, we checked the reference lists
