review of the literature” authors Haidi Wu and co-workers have described bleeding with prolongation of PT during rivaroxaban therapy and analyzed available literature. My general comments: This manuscript is well written and describes important clinical problem. Specific requirements regarding this clinical topic: the authors should mention patients’ other medical therapy at the time of PT prolongation. They must report whether the patient was given any other drugs that may be metabolized through the same metabolic pathway, or drugs that may induce enzyme inhibition and result in the rivaroxaban cumulation with toxic drug effects. Tables 1, 2, 3 are unnecessary and references towards origin of these tables should be placed instead. Otherwise if they wish to publish tables 1, 2, and 3 authors should provide written permission of publisher for reproduction of these tables.
