

Reply to Reviewer feedback for manuscript 42610

Reviewer 1 - This is a comprehensive review for colorectal cancer screening. The authors evaluated all popular guidelines and also supported the paper with recent articles. The tables summarize these data very well. The title, abstract and conclusion are appropriate. The subheadings are also well organized. The references are up to date.

Not applicable

Reviewer 2 - To the Authors, Good piece of work, well written. However, I have some comments: 1. Please, read carefully the Format for references and make corrections (the first author should be typed in bold-faced letters etc.) 2. It must be a common practice for authors to number the pages sequentially. 3. The core-tip is lacking. Please, write it. 4. Key-words are lacking! Please write them.

1. References now formatted according to Vancouver style.
2. Pages numbered appropriately.
3. Core tip now added.
4. Keywords present.
