### SPECIFIC COMMENTS TO AUTHORS

In this review, the authors have explained different strategies in the treatment of colorectal liver metastases including: surgical resection, liver augmentation strategies, conversion therapy, adjuvant chemotherapy, neoadjuvant therapy, liver-directed therapies and liver transplant. However, the surgical resection is still the cornerstone of

treatment for curative intent, the role of the other treatment approaches for the optimal management of colorectal liver metastases remains to be determined. In the absence of standardized evidence-based protocols, decision on management of colorectal liver metastases is still controversial. Nevertheless, tumour biology and molecular profiling have an important role in management planning. This review is valuable and worth enough to publish in the World Journal of Hepatology.

### SPECIFIC COMMENTS TO AUTHORS

This is an excellent mini review. In my personal opinion it must be priority publishing.  
Congratulations.
