## Elastography-based screening for esophageal varices in patients with advanced chronic liver disease

Paternostro R *et al.* Elastography-based screening for varices

Rafael Paternostro, Thomas Reiberger, Theresa Bucsics

### Abstract

Elastography-based liver stiffness measurement (LSM) is a non-invasive tool for estimating liver fibrosis but also provides an estimate for the severity of portal hypertension in patients with advanced chronic liver disease (ACLD). The presence of varices and especially of varices needing treatment (VNT) indicates distinct prognostic stages in patients with compensated ACLD (cACLD). The Baveno VI
