well structured. The materials & methods are well explained. The results are robust and supported by a well performed statistical analysis. The discussion is well argued. Figures are fully supporting the discussion. I suggest only : - to clarify the indications of the procedure in the 3 cases of perforation - to add a table describing all the variables concerning the 3 cases of perforation and how it was managed, eg like in a case series - to clarify why the procedure was not completed in 29% of cases Sincerely,
