SPECIFIC COMMENTS TO AUTHORS

Primary hepatic follicular dendritic cell sarcoma is very rare neoplasm and their successful clinical experience is valuable. I have several comments. 1. As the authors described, incidence rate of hepatic and splenic inflammatory pseudotumor (IPT)-like

FDCS relatively higher. I consider IPT-like FDCS could be differential diagnosis from the findings of Figure 1. The authors should document their diagnostic strategy for differential diagnosis between FDCS and IPT-like FCDS. 2. Please add the literature review of previous series of hepatic FDCS / IPT-like FCDS. 3. How about Ki-67 LI (MIB-1 index) in this case. 4. "EBER" should be documented as "EBV-encoded small RNA (EBER)".

SPECIFIC COMMENTS TO AUTHORS

Thank you for submitting your very interesting case report, I found it very intriguing and I am sure many readers will agree with my opinion. However, the paper requires some proper English language editing to make more comprehensible and easy to read.

For example in page 5, lines 3&\$; you wrote: (The patient did not subsequently receive either adjuvant chemotherapy or radiotherapy, except during regular reexamination), this does not make sense. It should be written this way: Except for regular follow up examination, the patient did not receive adjuvant chemotherapy or radiotherapy. There are few other miswording that need attention. Overall, scientifically speaking it was well-presented case report.
