Ultrasound (US) is an invaluable tool for evaluating dense **breast** tissue, with comparable sensitivity to digital **mammography** (DM) and improved detection of invasive and node-negative cancers. ... Studies evaluating the impact of **AI** and DS systems should measure performance in the context of clinical workflows.

2018年2月5日 - Anatomical and function **ultrasound** produces images/videos that we can apply machine learning on, while therapeutic **ultrasound** does not. **Ultrasound** is a relatively inexpensive and portable modality of diagnosis. The procedure is non-invasive and quickly gives radiologists information necessary to make diagnoses.

Xin-Wu Cui, Christoph F Dietrich

ABSTRACT

Artificial intelligence (AI) is gaining extensive attention for its excellent performance in image-recognition tasks and increasingly applied in breast ultrasound. AI can conduct a quantitative assessment by recognizing imaging
