RESULTS. The mean operative time for all cases between inserting the trocars and exsufflation was 158 min (range 60-280), but the mean operative times for retroperitoneal partial laparoscopic nephrectomy (RPPLN) and total laparoscopic nephrectomy were 161 min (90-210) and 157 min (60-280), respectively [Table 3].

Retroperitoneal and laparoscopic heminephrectomy in ...

tp.amegroups.com/article/view/11935/12557 ▾

Conclusions: MIS now represents the gold standard technique to perform partial nephrectomy in children with duplex kidney. Our results demonstrate that RPN remains a technically demanding procedure with a significantly higher complications and re-operation rate compared to LPN.

N2 - Purpose: Retroperitoneoscopic partial nephrectomy (RPN) in children is considered a complex technique with limited diffusion among pediatric surgeons and urologists. We aimed to report the outcome of this technique in infants and children with duplex kidney in a 5-year retrospective multicentric international survey.
