Induced pluripotent stem cells: applications in ...

[www.ncbi.nlm.nih.gov](#) › ... › [Front Cell Dev Biol](#) › v.3; 2015

Feb 02, 2015 · **Applications** of iPSCs. In case of iPSCs, there is no need of proliferation again and again, and, their derivatives are functional in-vitro as well as **in-vivo** after **transplantation**. **Induced pluripotent stem** cells are widely used in therapeutics for disease modeling, regenerative **medicine**, and drug discovery (Figure (Figure44)).

cGMP-Manufactured Human Induced Pluripotent Stem Cells ...

[www.ncbi.nlm.nih.gov](#) › ... › [Stem Cell Reports](#) › v.5(4); 2015 Oct 13

Oct 13, 2015 · Summary. The discovery of **induced pluripotent stem cells** (iPSCs) and the concurrent development of protocols for their **cell-type-specific** differentiation have revolutionized our approach to **cell** therapy. It has now become critical to address the challenges related to the generation of iPSCs under current good manufacturing practice (cGMP)...

DISEASE MODELING AND GE...

APPLICATION IN REGENERAT...

APPLICA

There is a great deal of information which is required to eventually provide better treatment for a disease. Knowing of any existing genetic predispositions for the disease and how these may impact molecular mechanisms to cause the disease phenotype are important. Below is a list of some diseases in which fibroblasts have been used as source cells and lentiviral integration has been used for the generation of iPSCs. 1. Huntington disease (HD) 2. ALS or Lou Gehrig's disease 3. Friedreich's atax...
