Impact of gout on in-hospital outcomes of acute coronary syndrome-related hospitalizations and revascularizations: Insights from the national inpatient sample

Rupak Desai, Tarang Parekh, Hemant Goyal, Hee Kong Fong, Dipen Zalavadia, Nanush Damarlapally, Rajkumar Doshi, Sejal Savani, Gautam Kumar, Rajesh Sachdeva

Abstract

BACKGROUND: Previous studies have established a role of gout in predicting risk and prognosis of cardiovascular diseases. However, large-scale data on the impact of gout

<https://www.ahajournals.org/doi/10.1161/CIRCOUTCOMES.118.004755>

Background Cardiovascular clinical trials have traditionally incorporated separate time-to-first-event analyses for their primary efficacy and safety comparisons, but this framework has a number of limitations, including limited patient-centeredness and a traditional requirement for central adjudication. Days alive and out of the hospital (DAOH) has the potential to provide additional insight.
