### SPECIFIC COMMENTS TO AUTHORS

In this manuscript, authors have reported three cases of postoperative pancreatic fistula. They were treated by continuous local lavage (CLL) and cured. As the results, authors concluded CLL had therapeutic potential for postoperative pancreatic fistula not only for

necrotizing and pancreatitis. The manuscript has been basically well written and the results seem to be interesting for readers. However, several issues should be clarified. 1. Basically, CLL is seemed to be a general treatment for pancreatic fistula. Why did not you perform CLL for fatal 2 cases? If it were impossible to perform CLL for these cases, reasons should be shown. 2. Pancreatic fistula is sometimes inevitable complication after pancreatic surgery. How do you think about usage of two-way tube or irrigation drainage tube at the operation? Please discuss. 3. Authors pointed out that maturity the artificial fistula was important. How long at least days should we wait for drain replacement based on your experiences?
