## **Exercise as medicine to be prescribed in osteoarthritis**

Ravalli S *et al.* Exercise is Medicine

Silvia Ravalli, Paola Castrogiovanni, Giuseppe Musumeci

### **Abstract**

Inactivity is listed as one of the factors which contribute to chronic diseases, including diabetes, hypertension, cardiovascular disorders, obesity and others. Higher incidence of sedentary habits can shorten life expectancy, as well. Exercise has been widely proposed as a valuable approach to prevention and regular physical activity, as part of daily routine, may help with managing pathological conditions. Among all, osteoarthritis (OA) is a degenerative disease of the articular cartilage which is classified as one of the most common causes of disability worldwide. Standard treatments, for this illness, include surgical procedures and pharmacological management, but behavioural approaches are also

## Osteoarthritis

Medical Condition

Inflammation of one or more joints.

- Very common (More than 3 million cases per year in US)
- Diagnosis often requires lab test or imaging
- Treatments can help manage condition, no known cure
- Can last several years or be lifelong

Osteoarthritis is the inflammation or loss of cartilage in the joints caused due to wear and tear. Symptoms include pain and stiffness in the joints, swelling, warm and tender joints and limited movement of affected joints. Medications, therapies, and surgeries help reduce inflammation and pain.

### Symptoms

Symptoms will appear and disappear in episodes but in severe cases, it is continuous. Person with osteoarthritis may experience the following symptoms:

- Pain & stiffness of joints (hand, knees, hip)
- Tender and warm Joints
- Swelling
- Limited range of movement

### Treatments
