SPECIFIC COMMENTS TO AUTHORS

This is an interesting manuscript describing a case of Calcifying Fibrous tumor of the gastro-hepatic ligament. The authors need to clarify the following 1. Why was the diagnosis of hematoma entertained at first presentation? Was there any history of blunt

trauma or anticoagulant medication use? In the presence of a solid tumor, would have been better to proceed with further EUS and surgery at first presentation. 2. Is there a better image on EUS, showing all layers of gastric wall intact with the tumor outside the gastric wall ? or the distinction between a sub-mucosal vs extra-gastric lesion could not be made due to attenuation of the layers? 3. It is not clear from the description of surgery whether a part of gastric wall was excised along with the tumor or the tumor could be separated from the stomach? Minor points 1. The description of IHC in Discussion can be shortened.

SPECIFIC COMMENTS TO AUTHORS

Calcifying fibrous tumor is a unique category of soft tissue tumor. The authors reported a case of CFT originated from the gastrohepatic ligament. The reviewer thinks that this is a reportable case in terms of its location and clinical presentation. Page 6, last paragraph:

SPECIFIC COMMENTS TO AUTHORS

This paper showed a case of calcifying fibrous tumor originating from the gastrohepatic ligament that mimicked a gastric submucosal tumor. This case is rare and interesting. However it will require some revisions before publication. 1, Please discuss about
