SPECIFIC COMMENTS TO AUTHORS

Dear author, The paper represents the clinical case which is representing the multidisciplinary clinical management and molecular characterization of a rare case of cardiac myxofibrosarcoma in an elderly woman. The article is written with the good

English-speaking adduction of the arguments. The article is sufficiently novel and very interesting to warrant publication. All the key elements are presented and described clearly. The most discussable options in the article are: 1) Please harmonize your English-speaking expression removing all the exaggerations including "extremely". 2) Would you correct all your typos and optimize the language such as "mitralic" (better just "mitral") and so on. You can check it out also with Grammarly which is available for free. Another example is "aspecific" - this word doesn't exist in English. 3) Figure 1: there must be at least one picture with the higher magnification. 4) Figure 2: Is that the only way to provide a reader with the relevant info about your genetic analysis? I would suggest here to have another figure with a scheme or a table merely to properly characterize your findings. What is challenging in your paper is a way you describe your genetic analysis. You emphasize your accomplishments but actually don't describe it properly neither in the text nor in the figure legend. Please, find out the tool (a scheme, a table, a comprehensive description) to report your genetic data. 5) Do you have a footage of CT and TTE of your patient. The more objective info is there the better.

SPECIFIC COMMENTS TO AUTHORS

Dear author please focus on molecular characterization by whole transcriptome sequencing of a cardiac myxofibrosarcoma because rest of stuffs are text burden

SPECIFIC COMMENTS TO AUTHORS

Comments to Authors Primary cardiac tumors are rare, whose incidence varies from 0.3 to 0.7% of all cardiac tumors. Primary cardiac myxofibrosarcoma is a very rare cardiac malignancy and genetically complex sarcoma of histological and biological

heterogeneity. In fact most evidence in the literature is limited to case reports. This case report is very interesting, well described and complete. The only suggestion would be to add an image from the transesophageal echo.
