A review of the present status of adjuvant chemotherapy for gastric cancer in Japan has been made. The single use of mitomycin C (MMC) after curative.

INTRODUCTION

Although radical gastrectomy is a standard treatment for advanced gastric cancer, recurrence is a critical issue for long-term survival of patients. Gastric cancer is still one of the most common causes of death due to malignancy^[1]. In the past, most researchers mentioned in their reviews that adjuvant treatment was not beneficial for improving survival after gastric cancer surgery. Some studies had found that adjuvant therapies did not improve the prognosis of patients with gastric cancer^[2,3].

After the 2000s, several large-scale controlled studies showed beneficial effects of adjuvant chemotherapy on the survival of patients with gastric cancer^[4,5]. These studies demonstrated better survival rates for patients who had received adjuvant therapies after gastrectomy for gastric cancer, as compared with patients who received surgery alone.

May 15, 2016 · **ADJUVANT CHEMOTHERAPY REGIMENS.** Surgical resection is the only hope for curative treatment in early stages of gastric cancer. However, only 40% of the patients with gastric cancer will remain disease free after complete resection of their tumour.

High response rates to combination chemotherapy reported by the end of the seventies led many oncologists to recommend standard treatment for gastric cancer. In randomized trials conducted by different groups, the response rate with fluorouracil (F), adriamycin (A), mitomycin C (M) ranged between 17 and 39% and was advocated for adjuvant treatment.

Although gastric cancer has showed a decreased prevalence in the past decade, it remains the third leading cause of cancer-related deaths [1]. This mortality might be owing to the still-high recurrence rate in advanced cases [2,3]. Therefore, adjuvant chemotherapy (AC) is an important component of the treatment modalities for advanced gastric cancer (AGC) [4,5].

Sep 01, 2013 · Implications for Practice: Adjuvant treatment in gastric cancer plays a big role after surgical resection in order to decrease tumor reoccurrence and improve overall survival. However, there is no globally accepted standard of care. Adjuvant chemotherapy after surgical resection has
