## Current state and future direction of screening tool for colorectal cancer

Hong JT *et al.* Screening tool for CRC

JiTaek Hong, Eun Ran Kim

### Abstract

As the second-most-common cause of cancer death, colorectal cancer (CRC) has been recognized as one of the biggest health concerns in advanced countries. The 5-year survival rate for patients with early-stage CRC is significantly better than that for patients with CRC detected at a late stage. The primary target for CRC screening and prevention is advanced neoplasia, which includes both CRC itself, as well as benign but histologically advanced adenomas that are at increased risk for progression to malignancy. Prevention of CRC through detection of advanced adenomas is

### [Colonoscopy and Colorectal Cancer Screening - Future ...](#)

<https://www.intechopen.com/books/colonoscopy-and-colorectal-cancer-screening-future...> ▾

**Colorectal cancer** (CRC) represents a major public health problem worldwide. Fortunately most CRCs originate from a precursor lesion, the adenoma, which is accessible and removable. This is the rationale for CRC **screening** programs, which are aimed to diagnose CRC at an early stage or even better to detect and resect the advanced adenoma before ...
