this consensus which I think they can improve its quality. There are some special groups that should be more noted. Regardless of HCV genotype, previous history of treatment. Co-infection with HIV/HBV/TB. Conditions like renal failure, renal and/or liver transplantation, hepatocellular carcinoma, and etc. are very important and they should be highlighted in separate section in such consensuses. Additionally, I suggest that authors speak more about possible plans of HCV eradication in CIS area. Best Reviewer

therapeutic regimens for treatment of HCV infections. Generally, it is a very in depth study, well written and well organized. Authors should include the following: 1) Emerging drug resistance and strategic planning to avoid the same. 2) The recent developments with respect to the treatment of hepatitis C infection with DAA, published during the period 2018-2019. 5) Minor degree of language polishing. The references are not according to the format of the journal. Reference section: PMID and DOI should be included.
