Current approaches to the management of patients with cirrhotic ascites

Garbuzenko DV *et al.* Management of patients with cirrhotic ascites

Dmitry Victorovich Garbuzenko, Nikolay Olegovich Arefyev

**Abstract**

This review describes current approaches to the management of patients with cirrhotic ascites in relation to the severity of its clinical manifestations. **1** The PubMed database, the Google Scholar retrieval system, the Cochrane Database of Systematic Reviews, and the **2** reference lists from related articles were used to search for relevant publications. Articles corresponding to the aim of the review were selected for 1991-2018 using the keywords: "liver cirrhosis," "portal hypertension," "ascites," "pathogenesis," "diagnostics," and "treatment." Uncomplicated and refractory ascites in patients with cirrhosis were the inclusion criteria. The literature analysis has shown **1** that despite the achievements of modern hepatology, the presence of ascites is associated with poor prognosis and high mortality. The key to successful management of patients with ascites may be the stratification of the risk of an adverse outcome and personalized therapy. Pathogenetically based approach to the choice of **1** pharmacotherapy and optimization of

## Current management of refractory ascites in patients with ...

<https://journals.sagepub.com/doi/full/10.1177/0300060517735231>

Liver **cirrhosis** is a health problem worldwide, and **ascites** is its principal symptom. Refractory **ascites** is intractable and occurs in 5%–10% of all **patients** with **ascites** due to **cirrhosis**. Refractory **ascites** leads to a poor quality of life and high mortality rate. **Ascites** develops as a result of portal hypertension, which leads to water–sodium retention and renal failure.
