

Supplemental Figure 1. Gut microbiome composition in ob/ob mice fed the Gubra Amylin NASH (GAN) or Amylin Liver NASH (AMLN) diet for 16 weeks. Fecal microbiome analyses were performed on mice also characterized for changes in metabolic parameters (see Figure 1). Serial fecal sampling was performed at baseline (chow feeding) and following 2 and 16 weeks of GAN or AMLN diet feeding. 16S PCR was carried out on fecal DNA extracts according to Kozich et al. (Appl Environ Microbiol 79: 5112-5120, 2013). Sequences from pooled libraries were trimmed from adaptors using BBTools [<http://sourceforge.net/projects/bbmap>] and processed into amplicon sequence variants (ASVs) with R package Dada (Callahan et al. Nat Methods 13, 581-583, 2016) and taxonomy assigned from the RDP3 training set v.14 as maintained by Dada2 repository. Analysis of the resulting taxonomic abundance matrices was done using the open source package MGSAT (Rosas-Salazar et al. Am J Respir Crit Care Med 193: 1180-1183, 2016; Rosas-Salazar et al. J Infect Dis 214: 1924-1928, 2016; Shilts et al. Microb Ecol 71: 233-242, 2016) which wraps several R packages in order to perform omics analyses [<https://github.com/andreyto/mgsat>]. ASV sequence counts were aggregated into genus counts and normalized into simple proportions per sample. Only genera within three top quartiles of mean abundance and incidence over the entire dataset were retained for further analysis. Geometric medians of the abundance profiles over the treatment groups were computed to represent group-wise trends across time points.

Supplemental Figure 2. Comparison of individual pre-post histopathological scores of steatosis, inflammation, and hepatocyte ballooning in *ob/ob* mice fed the Gubra Amylin NASH (GAN) or Amylin Liver NASH (AMLN) diet for 16 weeks (n=8-10 per group). A liver pre-biopsy was sampled in all mice after 9 weeks of feeding.

Accession key	Official symbol	Gene name	Gene set	Description

Supplemental Table 2. Various high-fat test diets evaluated in male C57BL/6J and *ob/ob* mice. Mice were from Janvier Labs (Le Genest Saint Isle, France). All high-fat diets contained 22% fructose, 10% sucrose, 2% lard, and 2% cholesterol. Chow diet was from Brogaarden (Hoersholm, Denmark), all other diets were from Research Diets (New Brunswick, NJ); ¹Histological data also indicated in Figures 2-3 and Supplemental Figure 2. AMLN, Amylin Liver NASH diet; ND, not determined.
