6  
 7  
 8 **Abstract**

9 **BACKGROUND**

10 There was no study comparing the difference in the failure patterns between  
 11 patients with or without post-operative radiotherapy (PORT) after  
 12 esophagectomy for pT3-4N0-3M0 esophageal squamous cell carcinoma (ESCC).

13  
 14 **AIM**

15 To investigate the differences in the failure patterns of stage pT3-4N0-3M0 ESCC  
 16 patients with or without PORT.

17  
 18 **METHODS**

19 Patients with stage pT3-4N0-3M0 ESCC, who underwent surgery with or without  
 20 PORT, were enrolled in this study. The primary endpoint was to investigate the  
 21 differences in the failure patterns between patients with or without PORT after  
 22 esophagectomy. The secondary endpoint was to estimate whether patients with  
 23 stage pT3-4 could achieve a disease-free survival (DFS) advantage after  
 24 receiving adjuvant PORT. Statistical analyses were performed by the Kaplan-  
 25 Meier method, Cox regression model and Chi-squared test or Fisher's exact test.

<https://academic.oup.com/dote/advance-article/doi/10.1093/dote/doz013/5373138> ▾

Mar 11, 2019 · The failure patterns of the two arms were significantly different ( $P = 0.002$ ). For pT3-4N0-3M0 ESCC patients, postoperative radiotherapy with SFI showed a similar survival outcome to LFI. However, the LRFS of patients with SFI was worse than that of patients with LFI.

## Failure Patterns in Patients with Esophageal Cancer ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3747650>

May 15, 2012 · Local failure after definitive chemoradiation therapy for unresectable esophageal cancer remains problematic. Little is known about the failure pattern based on modern day radiation treatment volumes. We hypothesized that most local failures would be within the gross tumor volume (GTV), where the bulk of the tumor burden resides.

Esophageal carcinoma (EC) is a common upper gastrointestinal tumor, with the third incidence and the fourth mortality in China<sup>1</sup> ). Despite improvements in diagnosis and treatments of esophageal cancer patients, overall 5-year survival rates were still very low (~40%)<sup>1,(2)</sup>. Esophagectomy is the standard strategy for resectable EC.

## UpToDate

<https://www.uptodate.com/contents/radiation-therapy-chemoradiotherapy-neoadjuvant...>

Cancer of the esophagus is a highly lethal malignancy. There are approximately 17,750 people diagnosed with esophageal cancer each year in the United States, and 16,080 deaths from the
