SPECIFIC COMMENTS TO AUTHORS

Sagnelli et al. wrote an editorial about the worldwide eradication of HBV infection. I like to read it. I like to read it. The editorial is well written. Giving more information about the new drugs would be better. you for giving

education campaign, Hepatitis B screening, Hepatitis B vaccination. 4. This Editorial study described the background, present status and significance of the study. 5. The research objectives were achieved and this Editorial study opened the door for further studies to reach a solution for the complete eradication of HBV infection. 6. They also present a very important and interesting point which is related to New drugs targeting more than one HBV-lifecycle steps and of some new immunotherapeutic agents which are under investigation with the aim of obtaining the clearance of hepatocytic cccDNA through their synergistic action. This may give a hope that both HBV infections and occult HBV infection can be get rid of. 7. This Editorial study cites appropriately the latest, important and authoritative references. 8. It is well presented; the language and grammar are accurate and appropriate. Comment to authors: This is a very interesting and important Editorial study which spots the light on the way of eradicating HBV from the world, It covered excellently all the ways that may lead to decrease the incidence of HBV in the world. But there is another point that is not covered and it is very important from my point of view and from my experience which is the problem of vaccine non-responders. As those individuals will be the target for infection. What is the cause of non-responding in certain individuals: Is it the vaccine and it need to be improved? Or is it an individual factors?
