[onlinelibrary.wiley.com/doi/10.1002/bjs.7602/abstract](https://onlinelibrary.wiley.com/doi/10.1002/bjs.7602/abstract)

The aim of this study was to clarify whether acute uncomplicated diverticulitis is a valid indication for subsequent colonoscopy/computed tomography (CT) colonography. Methods: This was a retrospective longitudinal study of patients with an initial presentation of acute uncomplicated diverticulitis on the basis of CT criteria, at a single institution between January 2004 and December 2008.

With high sensitivity (94 %) and specificity (99 %) of CT for diagnosing diverticulitis, and a sensitivity ranging between 50 % and 100 % for the identification of alternative diseases, the need for routine colonoscopy after CT-proven acute diverticulitis can be questioned [10].

Materials and Methods: A comprehensive literature review was performed to find articles in which patients with CT diagnosis of acute diverticulitis underwent surgery, colonoscopy, or barium enema study within 24 weeks. Patients meeting these criteria were included for analysis.

INTRODUCTION

MATERIALS AND METHODS

RESULTS

DISCU

Acute diverticulitis results from inflammation of a colonic diverticulum. It usually has an uncomplicated course, manifesting primarily as pain; however, some patients may have abscesses, fistulas, obstruction, and/or perforation at presentation. Acute diverticulitis imposes an important clinical burden on health care systems, resulting in more than 300 000 hospital admissions and \$2.5 billion in cost annually (1,2). Computed tomography (CT) of the abdomen is often the diagnostic test of choi...

Based on our study, we concluded that early colonoscopy in acute diverticulitis is feasible. It should be reserved either for all patients with no air adjacent to diverticuli on CT or just for ...

## Routine colonoscopy after left-sided acute uncomplicated ...

[https://www.giejournal.org/article/S0016-5107\(13\)02558-3/fulltext](https://www.giejournal.org/article/S0016-5107(13)02558-3/fulltext)

The use of routine colonoscopy after an episode of acute diverticulitis (AD) remains a point of debate. Most international and clinical practice guidelines advise endoscopy after conservatively treated diverticulitis. 1-6 The rationale has always been to exclude an underlying malignancy or advanced colonic neoplasia (ACN). However, this is based merely on expert opinion.
