Total laparoscopic hysterectomy: A case report from ILE ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3640250>

Total laparoscopic hysterectomy (TLH) is an advanced gynecological laparoscopic procedure that is widely performed in the developed world. However, its feasibility in resource-poor settings is hampered by obvious lack of equipments and/or skilled personnel. Indeed, TLH has never been reported from any Nigerian hospital.

Abstract

BACKGROUND

Uterine myomas are the most common benign gynecological soft tissue tumors in women but polycythemia associated with these tumors is rare. Polycythemia is significantly associated with risk of venous thromboembolism (VTE), which is further increased in case of a large pelvic mass and obesity. Here we report the surgical challenges in the case of an obese patient with a giant fibromatous uterus and associated polycythemia.

CASE SUMMARY

A 42-year-old obese woman was referred to our department for treatment for a huge
