SPECIFIC COMMENTS TO AUTHORS

The VEGF-C/PI3K/AKT signaling pathway plays an important role in lymphangiogenesis and metastasis of gastric cancer. This study investigated downregulation of LSD1 expression in order to observe the changes in gastric cancer cell proliferation and invasion, and further explored the role of the VEGF-C/PI3K/AKT signaling pathway. Overall, this study is well designed and the results are very interesting. Before the final publication, the manuscript should be edited and revised. I have some minor comments to the authors: 1 The manuscript should be checked. Some blanks are missing, such as the title "gastric cancer cells", should be "gastric cancer cells". And some Chinese comma should be replaced. 2 Background should be added in the abstract, only a title was listed. 3 Figures and table should be moved to the end of the main text. 4 Results are well discussed with updated references. However, the references list requires an editing according to the journal's style.

Response: Thank you for your comments. First, we checked and revised the manuscript, adding Spaces and replacing Chinese commas. Secondly, we supplemented the background. Third, figures and table have been moved to the end of the main text; Finally, we have edited the list of references according to the journal's style. Thank you very much for your opinion. It's of vital importance to us.

SPECIFIC COMMENTS TO AUTHORS

The aim of the study is clear, and the methods are in detail. However, the manuscript requires an editing. Some minor language polishing should be corrected. Where is the Back ground in the abstract? Please add.

Response: Thank you for your comments. We have examined and edited the manuscript and added background to the abstract

Thank you very much for your opinion. It's of vital importance to us.
