SPECIFIC COMMENTS TO AUTHORS

Dear author, The paper represents an Editorial Letter which is summarizing the main reasons why learning how to use these tools to be part of the conversation is essential for the cardiologist. The article is written with the good English-speaking adduction of the arguments. The article is sufficiently novel and very interesting to warrant publication. All the key elements are presented and described clearly. The most discussable options in the article are: 1) Would you please kindly correct all your typos (incl. dots, articles) throughout the manuscript. I would suggest even to scan the paper with Grammarly. For instance, check out your Abstract, the second paragraph. 2) It seems to me that the paper and thoughts are nice, but it might be great to elaborate your ideas for instance with some SoMe statistics (always published immediately after the conference incl. number of participants, tweets, endorsements and so on) from one of the international meetings revealing the scale and professional value of SoMe. 3) Do you think this is a place to discuss a role for the networking, dissemination of the accomplishments, a dialogue with the patient. I see there is a room for the elaboration.

Thanks for your kind words about our editorial

In relation with most discussable options in the article

- 1) We tried our best to correct the typos in the new version even using the tool proposed
- 2) One table (table 1) was added to show the impact of tweets in the congress as proposed
- 3) Some elements were added about the value of SoMe for networking trying to keep the paper short as it is an editorial

SPECIFIC COMMENTS TO AUTHORS

I found the editorial manuscript by Vidal-Perez et al. "Social media in cardiology: Reasons to learn how to use it" quite interesting as it has addressed a hot topic in day to day practice. It is a must to do for any physician to get involved in social media because it offers unique opportunities for networking, dissemination of the knowledge, and get in touch with people who are increasingly interested in learning more about the causes and processes in their problems especially those with chronic character such as cardiac problems. considering this broad range of utilities we may define for social media, I think we need a more comprehensive approach to it. For instance, the authors are recommended to add more details and examples on different types of social media and their application in cardiology. They should not overlook to tell the history of social media employment in cardiology. Moreover, they should note that some indices such as Altmetric are based on this concept. Youtube which as the second common search engine after google, is a social media itself which should be discussed. There are typos that needs correction in revision such as: worth to mention, many information, there no boundaries..., the paragraph starting with "and the reason to take note of these tools..."

Thanks for your kind words about our editorial

We tried our best to correct the typos in the new version

We are happy to hear about your interest about the topics and some of your comments about impact in publications with Altmetric or the role of youtube have been added. We give some short sentences only as we want to keep the document simple as we are dealing with an editorial paper

SPECIFIC COMMENTS TO AUTHORS

The authors commented the status of social media in the field of cardiology and the reasons to how to use social media in medicine. The contents of present editorial seems to be acceptable, however, the impact seems to be week. #The authors should provide any figure or table to give the readers impact more strongly.
