DEFENITION/DESCRIPTION

CLINICAL RELEVANT ANATO...

EPIDEMIC

Ankle impingement is defined as pain in the ankle due to impingement in one of two areas: anterior (anterolateral and anteromedial) and posterior (posteromedial). Location of pain is referenced from the tibiotalar (talocrural) joint. Anterior ankle impingement generally refers to entrapment of structures along the anterior margin of the tibiotalar joint in terminal dorsiflexion. Posterior ankle impingement results from compression of structures posterior to the tibiotalar and talocalcan...

Introduction

Anatomy

Causes

Symptoms

Diagnosis

Ankle impingement occurs when soft tissues around the ankle are pinched or nipped. Impingement mainly happens when the ankle is fully bent up or down, leading to pain either in the front or back of the ankle joint. Problems near the front of the joint are usually associated with past ankle sprains. Pinching in the back of the ankle occurs most often in ballet dancers and is usually due to irritation around a bony prominence on the back of the ankle. This guide will help you understand 1. how a...
