Role of endoscopic ultrasound in the screening and follow-up of high-risk individuals for familial pancreatic cancer

Lorenzo D *et al* Endoscopic ultrasound in familial pancreatic cancer

Abstract

Managing familial pancreatic cancer (FPC) is challenging for gastroenterologists, surgeons and oncologists. High-risk individuals (HRI) for pancreatic cancer (PC) (FPC or with germline mutations) are a heterogeneous group of subjects with a theoretical lifetime cumulative risk of PC over 5%.

The role of endoscopic ultrasound in pancreatic cancer ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4770628>

Jun 27, 2015 · ROLE OF ENDOSCOPIC ULTRASOUND AND OTHER IMAGING STUDIES IN SCREENING HIGH-RISK INDIVIDUALS. The yield was significantly greater in individuals >65 years. Six patients underwent resection after EUS-FNA and pathology was the main duct IPMN (n = 2), PanIN 2 (N = 1), panIN 3 (N = 1), and adenocarcinoma (N = 1).

Pancreatic cancer screening in high-risk individuals ...

<https://www.mayoclinic.org/medical-professionals/digestive-diseases/news/pancreatic...> ▼

Although the findings suggest a role for pancreatic cancer screening in high-risk populations, Dr. Wallace and colleagues caution that further research is needed. "Before we can implement broad-based screening programs, additional research must confirm that screening is cost-effective and that it reduces mortality and outweighs the risks of testing and surgery.

Screening for Pancreatic Cancer in High-Risk Individuals ...

clincancerres.aacrjournals.org/content/15/6/1907 ▾

Mar 15, 2009 - Screening has begun, however, in the subset of patients at the highest risk of disease,

such as those with inherited risk due to **familial multiorgan cancer syndromes** or in familial groupings

of **pancreatic cancer** with yet unidentified genetic abnormalities, termed **familial pancreatic cancer**.

Screening is currently done at several large centers in the world, each with a unique multidisciplinary

approach and **series of screening tests**.
