Observational Study

Direct costs of carcinoid syndrome diarrhea among adults in the united states

Dasari A *et al.* Direct costs of ¹carcinoid syndrome diarrhea

Arvind Dasari, Vijay N Joish, Raul Perez-Olle, Samyukta Dharba, Kavitha Balaji, Daniel M Halperin

Abstract

BACKGROUND

The burden of carcinoid syndrome (CS) among patients with neuroendocrine tumors is substantial and has been shown to result in increased healthcare resource use and costs. The

Carcinoid Syndrome

Medical Condition

 Image for Condition

The group of symptoms that occur in patients with carcinoid tumors.

 Extremely rare (Fewer than 1,000 cases per year in US)

 Requires lab test or imaging

 Treatment from medical professional advised

 Can last several years or be lifelong

Caused by advanced carcinoid tumors Symptoms include hot flushes, purple skin lesions, diarrhea, wheezing and breathlessness. Involves chemotherapy, radiotherapy, and surgeries.

Symptoms

The symptoms of carcinoid syndrome depend on the chemicals being released into the bloodstream

The most common symptoms are:

- Hot flushes on the skin that last for a few minutes or hours
- Purple lesions that appear as spider- like veins on the face particularly the upper lip and nose
- Frequent diarrhea
- Wheezing
