By contrast, entecavir and tenofovir have a high barrier to resistance and should therefore be exclusively used to treat chronic hepatitis B. 19 Three mutations must be present for entecavir resistance to occur, including rtLeu180Met, rtMet204Val, and one of rtThr184Gly/Ser, rtSer202Ile/Gly, or

Hepatitis B

Medical Condition

Image for Condition

A serious infection of the liver caused by hepatitis B virus (HBV).

- Common (More than 200,000 cases per year in US)
- Transmitted through direct contact
- Usually preventable by vaccine
- Often requires lab test or imaging
- Treatments can help manage condition, no known cure
- Can be lifelong

An infection caused by HBV that affects the liver. Spreading through exposure to virus by blood, semen, saliva, or vaginal fluids, the virus is transmitted through unsafe sexual practices and from an infected mother to her child. Symptoms include loss of appetite, nausea, body aches and fever progressing to jaundice. Chronic form of the infection is not curable, but HBV is preventable by vaccination.

Symptoms

Common symptoms are:

- Pain in the area of liver or abdominal pain
- Dark urine
