Ramucirumab: A New Therapy for Advanced Gastric Cancer

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4577036>

Jan 01, 2015 · However, a phase III clinical trial did not demonstrate a significant improvement in overall survival when adding bevacizumab to chemotherapy for first-line **treatment** of **advanced gastric cancer** (Ohtsu et al., 2011). **Ramucirumab** (Cyramza) is the first FDA-approved agent to reduce tumor angiogenesis by targeting the extracellular domain of the VEGFR.

Ramucirumab monotherapy for previously treated advanced ...

[https://www.thelancet.com/journals/lancet/article/PIIS0140-6736\(13\)61719-5/fulltext](https://www.thelancet.com/journals/lancet/article/PIIS0140-6736(13)61719-5/fulltext)

Ramucirumab is the first biological **treatment** given as a single **drug** that has survival benefits in patients with **advanced gastric** or **gastro-oesophageal** junction adenocarcinoma progressing **after first-line chemotherapy**. Our findings validate VEGFR-2 signalling as an important **therapeutic** target in **advanced gastric cancer**.

Bronchobiliary fistula after ramucirumab treatment for advanced gastric cancer: A case report

Kim HB *et al.* Bronchobiliary fistula after ramucirumab

Hong-Beum Kim, Yong Sub Na, Hee-Jeong Lee, Sang-Gon Park

Abstract

BACKGROUND

Bronchobiliary fistula (BBF) is a rare disease characterized by an abnormal connection between the biliary system and bronchi. Traditional causes of BBF include trauma and infections, and more recent causes include malignancies and certain cancer treatments. Ramucirumab is an antivasculature endothelial growth factor receptor 2 monoclonal

Paraneoplastic dermatomyositis appearing after nivolumab ...

<https://jmedicalcasereports.biomedcentral.com/articles/10.1186/s13256-019-2105-9> ▾

Jun 02, 2019 · Here we **report a case** with **advanced gastric cancer** who developed symptoms of myositis **after** initiation of nivolumab as the third-line chemotherapy, which was difficult to diagnose as paraneoplastic dermatomyositis or drug-associated myositis. The final diagnosis was paraneoplastic dermatomyositis, which was unexpected.
