SPECIFIC COMMENTS TO AUTHORS

This case report is brilliantly presented. The quality of the images is very good. There are some minor spellings in the manuscript (e.g., labeling of table 1: case reports). The topics of discussion is appropriate for the length of the manuscript.

SPECIFIC COMMENTS TO AUTHORS

The authors reported a case of IPNB which developed over a decade in a patient with hepatic cystic lesions and reviewed the current literature. I think that the manuscript is well-written, highly scientific and can be published in its current form.

SPECIFIC COMMENTS TO AUTHORS

Regarding the manuscript entitled "Long-term growth of an intraductal papillary neoplasm of the bile duct: A case report and literature review", authors reported a case study and concluded that The development of IPNB should be monitored over decades in patients with hepatic cystic lesions. I found this manuscript with potential interest but

<https://www.wjgnet.com>

I have some comments 1- Authors should mention a previous case report related to its topic like "Intraductal papillary neoplasm of the bile ducts: A case report and literature review. World J Gastroenterol. 2015 Nov 21; 21(43): 12498-12504." and also mention the difference between two cases. 2- There are some typos and grammar mistakes so, I encouraged authors to revised the manuscript. 3- The introduction section is very short, it required to be informative.

SPECIFIC COMMENTS TO AUTHORS

The authors reported a patient with intraductal papillary neoplasm of the bile duct (IPNB) that had grown over 13 years. In this case, IPNB developed from nothing to growth to 9 mm, which observed the whole process of tumor formation. The paper was very interesting, and some points needed to improve. 1. The authors showed that

<https://www.wjgnet.com>

ultrasound-guided histological puncture of tumor-post was performed and no malignancy was found, and the pathological results should be supplied. 2. The characteristic of this case is long term follow up. However, the IPNB has been reported many times. What are the other characteristics of this case? These contents should be fully discussed. 3. IPNB is classified into four subtypes based on the histomorphology and immune-phenotypical profile: pancreato-biliary, intestinal, gastric, and oncocytic subtypes. The authors should discuss the immunohistochemical results of the case. 4. Language quality need to be improved.
