SPECIFIC COMMENTS TO AUTHORS

This is a well written case report and literature review of patients with anomalous pancreaticobiliary union (PB maljunction) who underwent “cyst” resection but developed subsequent cholangiocarcinoma. In the authors’ case, this was a recurrent intraductal neoplasm. 1. Minor concerns a. Figure 5 caption: Add ...”interval time for cholangiocarcinoma development.” b. Please clarify “flow diversion surgery.” How many of these patients had roux-en-y hepaticojejunostomy. How many hepaticoduodenostomy? Extended Whipple resection? Other surgery? c. The reviewer finds Table 1 confusing. Please separate years from cases and consider adding a third column. d. You state that this patient had an APBU but your MRCP (Figure 1) fails to demonstrate this. 2. Major concerns Only 60–70% of patients with “congenital” choledochal cysts have an anomalous PB union. As such contributing duct dilation (as well as gall bladder and bile duct cancer development) to reflux of pancreatic enzymes is problematic. This needs comment in your manuscript but may support your suggestion that enteral reflux or chronic bacteribilia or intrinsic abnormality of the residual unresected duct are etiologic in development of subsequent malignancy.

The authors present a case report of Cholangiocarcinoma after flow diversion surgery for pancreaticobiliary maljunction with congenital biliary dilatation, and review of the literature. The case is of interest, however a few papers have already address the issue and it lacks novelty. I have no specific comments. The paper needs english revision.
