Kidney inflammatory myofibroblastic tumor masquerading as metastatic malignancy: A case report and literature review

Zhang GH *et al.* Kidney IMT masquerading as metastatic malignancy

Guo-Hui Zhang, Xiao-Yan Guo, Gao-Zhao Liang, Qing Wang

Abstract

BACKGROUND

Inflammatory myofibroblastic tumor (IMT) is a rare mesenchymal tumor and is characterized by spindle cells differentiated from muscle fibroblasts and infiltration of various types of inflammatory cells. IMT can occur at any age and at any anatomic site. The most common location of IMT is the bladder in the genitourinary tract. Only scarce reports of kidney IMT have been reported
