## IgG4-related disease mimicking pancreatic cancer: Case ...

<https://www.sciencedirect.com/science/article/pii/S2210261218302803>

IgG4 Related Disease (IgG4-RD) is a rare cause of **pancreatic mass** lesions that should be kept in the differential diagnosis, as a **pancreatic** biopsy may be avoided if the disease is suspected and identified. The patient in this **case report** was treated at our General Hospital, which is an academic medical center and part of a Medical Corporation.
