Minimally Invasive Surgery Week: MIS13 Scientific Abstracts

<https://laparoscopy.blogs.com/ee06/2013/08/mis13-scientific-abstracts.html> ▾

Methods and Procedures: This is a single **patient case report** with the use of 2 Storz 3.5 mm instruments and trocars in a laparoscopic myomectomy. Two 5 mm trocars were also placed in the left and right upper quadrant and a 10 mm trocar was placed in left lower quadrant for morcellation in order to maintain cosmetic benefit.

rabbit mandibular distraction: Topics by Science.gov

<https://www.science.gov/topicpages/r/rabbit+mandibular+distraction> ▾

This report describes the case of a 7-year-old boy suffering from micrognathia, aglossia, and **situs inversus** totalis simultaneously, and the treatment for his micrognathia by mandibular symphyseal midline distraction osteogenesis, guided by virtual surgical planning and a three-dimensional printed surgical template.

MedWorm: Anatomy Research

<https://medworm.com/research/anatomy.xml>

Because of this, a **system** of prehospital management of traumas must be established, in order to promote a better prognosis for patients. The present study aims to **report the case of a patient** suffering

Surgical anatomy imaging associated with cervical cancer ...

https://www.researchgate.net/publication/259350365_Surgical_anatomy_imaging_associated...

In addition, we established a three-dimensional (3D) reconstruction model for precise observation of the surgical anatomy using Materialise's Interactive Medical Image Control System (Mimics).

Minimally Invasive Surgery Week: MIS13 Scientific Abstracts

<https://laparoscopy.blogs.com/ee06/2013/08/mis13-scientific-abstracts.html> ▾

Conclusion: Using related 3D software with database collected through CTA, the cervical cancer's arterial network model in vivo could be successfully constructed, which may contribute to the materialization of digital models and be used for individualization evaluation and to guide inter-arterial chemotherapy, lymphadenectomy and radical hysterectomy.

actual patient anatomy: Topics by Science.gov

<https://www.science.gov/topicpages/a/actual+patient+anatomy.html> ▾

We report the use of three-dimensional or 3D printed, patient-specific anatomy as a tool to improve informed patient consent and patient understanding in a case of posterior lumbar fixation. Next, we discuss its utility as an educational tool to enhance imaging interpretation by neurosurgery trainees.
