Acute myocardial infarction in a patient with ...

<https://jmedicalcasereports.biomedcentral.com/articles/10.1186/1752-1947-5-582> ▾

Dec 19, 2011 - A 42-year-old Tunisian man with **congenital hypofibrinogenemia** and no cardiovascular risk factors presented with new **onset prolonged angina pectoris**. An electrocardiogram showed features of inferior acute **myocardial infarction**. His **troponin** levels had reached 17 ng/L. Laboratory findings confirmed hypofibrinogenemia and ruled out thrombophilia.

Abstract

BACKGROUND

Myocarditis refers to a variety of myocardial inflammatory lesions. A variety of factors such as infection, physical and chemical factors can cause myocarditis; the severity of myocardial damage caused by a great deal of different clinical manifestations, patients can manifest heart failure, cardiogenic shock and even sudden death. We present a case report of viral myocarditis that mimicked as acute coronary syndrome.
