BACKGROUND Delayed coronary obstruction (DCO) is an uncommon and barely reported complication following transcatheter aortic valve replacement (TAVR). OBJECTIVES The aim of this study was to describe the incidence and pathophysiological features of DCO after TAVR, obtained from a large international multicenter registry.

Jul 12, 2018 · Transcatheter aortic valve implantation (TAVI) has undoubtedly revolutionised the treatment of severe aortic stenosis and has become the preferred treatment option for patients at increased surgical risk. 1,2 Although outcomes have improved and complications reduced over time, certain potentially catastrophic complications remain. 3,4 Coronary obstruction has long been a feared complication and is classically recognised to occur in the acute setting just after valve deployment...

## Delayed right coronary ostial obstruction after J-Valve deployment in transcatheter aortic valve implantation: A case report

Xu Z *et al.* Right coronary obstruction after TAVI

Zhao Xu, Hong Yu, Peng Liang

### Abstract

#### BACKGROUND

Aortic stenosis is the most common valve disease in adults. Transcatheter aortic valve implantation (TAVI) is being increasingly applied for intermediate- to low-risk patients. We here describe an uncommon complication of delayed right coronary obstruction in a transapical TAVI case.
