1. The review is about a rarely seen problematic topic. 2. The review is well, concisely and coherently organized and presented. Also the number and content of the tables and figures are sufficient. 3. The title reflects the main subject of the review well. The abstract summarizes and reflects the main subject of the review. The key words reflect the focus of the manuscript. 4. The review adequately describes the background, present status and significance of the GES. The authors should correct/rewrite the words highlighted in red; in terms of English grammar such as leaving a blank between the words, rearrangement of the references both in the text and the references section according to the guidelines, not beginning to the sentence with an abbreviation or a number. (I sent the highlighted text back in the attachment)
