Systemic Inflammation and Acute-on-Chronic Liver Failure ...

<https://www.ncbi.nlm.nih.gov/pubmed/30155448>

Aug 01, 2018 · Systemic Inflammation and Acute-on-Chronic Liver Failure: Too Much, Not Enough. potential therapeutic targets emerge that warrant further study such as restoring or substituting albumin via plasma exchange or via albumin dialysis and evaluating usefulness of TLR4 antagonists, modulators of gut dysbiosis (pre- or probiotics), and FXR ...

Therapeutic plasma exchange in acute liver failure ...

https://www.researchgate.net/publication/334711554_Therapeutic_plasma_exchange_in...

Plasma exchange may be considered in acute liver failure in patients with residual liver function before transplantation is finally decided. In addition, plasmapheresis may be used to keep patients...

High-volume plasma exchange in patients with acute liver ...

<https://www.ncbi.nlm.nih.gov/pubmed/26325537>

BACKGROUND & AIMS: Acute liver failure (ALF) often results in cardiovascular instability, renal failure, brain oedema and death either due to irreversible shock, cerebral herniation or development of multiple organ failure. High-volume plasma exchange (HVP), defined as exchange of 8-12 or 15% of ideal body weight with fresh frozen plasma in ...

Therapeutic plasma exchange in acute liver failure - Stahl ...

<https://onlinelibrary.wiley.com/doi/full/10.1002/jca.21737>

Multi-organ dysfunction in acute liver failure (ALF) has been attributed to a systemic inflammatory response directly triggered by the injured liver. High-volume therapeutic plasma exchange (HV-

Acute liver failure

Disease

Acute liver failure is the appearance of severe complications rapidly after the first signs of liver disease, and indicates that the liver has sustained severe damage. The complications are hepatic encephalopathy and impaired protein synthesis. The 1993 classification defines hyperacute as within 1 week, acute as 8–28 days, and subacute as 4–12 weeks. It reflects the fact that the pace of disease evolution strongly influences prognosis. Underlying cause is the other significant determinant of outcome.
