

## **Biostatistics statement**

*8/10/2019*

Manuscript: "A systematic review of yttrium-90 radioembolization for unresectable hepatic metastases of breast cancer"

The study author did not consult a statistician during the production stage of the manuscript. The study reports cumulatively data from previously published peer-reviewed manuscripts. A meta-analysis was not performed and a descriptive data presentation is presented in the manuscript. As such consultation with a biostatistician was not deemed to be necessary.

Yours sincerely,

Michael Feretis
